**AXIAL ELASTIC ELEMENT – AUTOMATIC CHAIN TIGHTENER – AUTOMATIC BELT TIGHTENER - TENSION BLOCK DOWN HOLDERS – SHOCK ABSORBER**

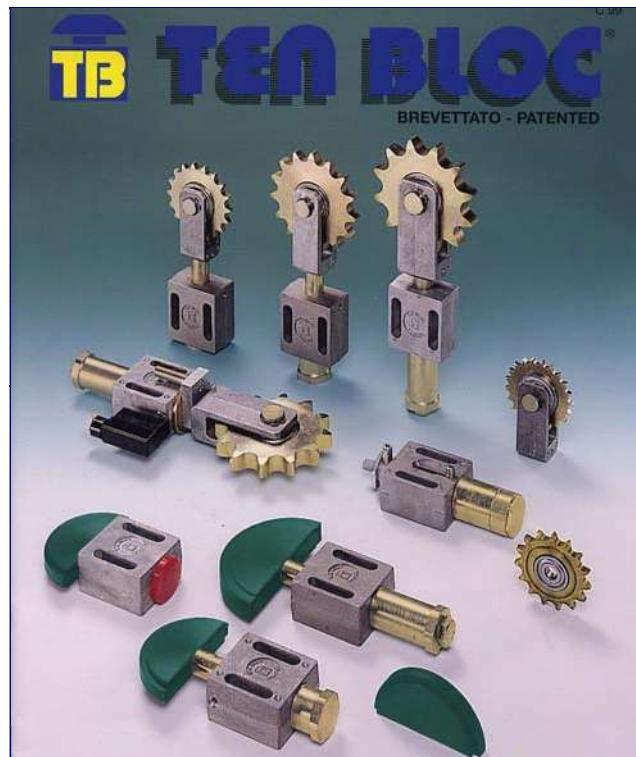

**Main features:** Modular, one column-one spring, two screws for the fixing, Strong - structure made of metal, aluminium, steel - possible components made of stainless steel - low and high generated loads - fixed or rotating head – preloading – anti-rotation – one-directional - travel-end switch for checking – low and high operating temperatures – shock absorber – pressure application – return supports for transmissions and conveyors – manual tightener.

TEN BLOC is an automatic axial chain or belt tightener designed to satisfy the widest market-needs: automatic chain tensioner device, automatic belt tensioner device, automatic tensioner of driven shaft of chain or belt conveyors, bumper, pressure units etc.

TEN BLOC consists of a steel column thrusted by a mechanical spring connected to a box-shaped body made of die-cast aluminium. The column slides inside a bronze ring lodged inside the body. It is possible to mount different types of interface kits on the top of the column: polyethylene sliding blocks (type V and L), polyethylene wheels on fork (type RF), pinions on fork (type RR) and zinc plated steel rollers on fork (RAU) or polyamide rollers on fork (RAP). TEN BLOC can be provided with a preloading system (TB), with a one-directional system (TBB) or with an anti-rotation system (TBA). The box-shaped body can, furthermore, be equipped with an electric travel-end switch that allows to check whether the machine works properly at every moment. In case of excessive chain lengthening or chain breaking the same device activates an acoustic or light signal or, if necessary, stops the plant. Also part of the TEN BLOC product range are the DECA pressure units for driven shaft of belt or chain conveyor. DECA can also be used as shock absorbers and decelerators. With DECAs one can obtain different forces of thrust and different travels according to one's actual needs. The entire TEN BLOC product range makes it possible, on request, to perform special executions such as elements with double slide guide (TBCU) or elements functioning in drag conditions (TBt). TEN BLOC furthermore distinguishes itself for its modularity as it aptly joins several base elements (columns, cylinders, plugs, springs, junctions and bodies) thus enabling one to produce user-defined products which will suit individual needs.

## 安装指导: / Assembly instructions:

Ten Bloc 张紧装置通过 M8 螺钉在位置 (A) 固定在机器结构上，见 图 1，这些螺钉插在主体上宽度为 9mm 的槽中。

在盒状主体的两边中其中一边，另外还存在四个凹处，在使用者想提高张紧装置的固定的情况下，可作为使用插销或 M6 螺钉在主体上穿孔的记号，见图 1 位置(B)。

 Ten Bloc tensioners are fixed to the structure of the machine by M8 screws, positioning (A) of figure 1, that are put in slots with length 9mm present on the body.

On one of the two sides of the box body there are also four hollows that can be used as marks if the user want to drill the body in order to increase the fixing of the tightener by pins or M6 screws, positioning (B) of figure 1.

## 预加压系统: / Preloading system:

为了简化安装步骤，TEN BLOC 张紧装置 TB 或 TBP 型具备一个预加压系统。在尺寸从 10 到 40 的张紧装置中，预加压系统使用一个定位在张紧装置侧面的无头螺钉 (C)，更大的尺寸，使用一个定位在堵盖底部的 TE M8 或 M12 螺钉 (D)。

### 尺寸 TB 10-20-30-40 (图 2):

用手或钳子或压力机压紧张紧装置，在最高压缩的位置用止动螺钉扳手或 T 形扳手将无头螺钉 (C) 在主体侧面拧紧。在将张紧装置在之前所描述的准确位置安装在设备上之后，拧下无头螺钉。圆柱将从中退出，张紧装置将开始工作。

### 尺寸 TBP 50-60-70-80-90 (图 3):

拧下在堵盖底部的螺钉 M8 或 M12 (D)。圆柱将压紧弹簧重新进入。在将张紧装置在之前所描述的准确位置安装在设备上之后，拧松预加压螺钉直到完全拔出。圆柱将从中退出，张紧装置将开始工作。

 TEN BLOC tensioners type TB or TBP have a preloading system to facilitate the assembling operations. This system is realized by a grub screw (C) positioned on the side of the tensioner in the sizes from 10 to 40, and by a TE M8 or M12 screw (D) positioned on the bottom of the cap for the following sizes.

### Size TB 10-20-30-40 (Figure 2):

Compress the tensioner by hand, or by vice, or by press, while it is in the maximum compression position, tighten with setscrew wrench or T-wrench the grub screw (C) on the side of the body. After you have positioned the tightener on the plant, fixing it in the right position as we described previously, unscrew the grub screw. The column will come outside and the tensioner will start to work.

### Size TBP 50-60-70-80-90 (Figure 3):

Tighten the M8 or M12 screw (D) positioned on the bottom of the cup. The column will reenter compressing the spring. After you have positioned the tightener on the plant, fixing it in the right position as we described previously, unscrew the preloading screw until it takes it out completely. The column will come outside and the tensioner will start to work.

## 单向组件的安装指导

### Assembling instructions of a ONE-DIRECTIONAL element

TEN BLOC 型号 TBB 强制圆柱在单一方向操作，即推动方向。在张紧装置上施与棘轮效应，不允许圆柱在运转中重新进入。使用这种方法，张紧装置对伸长进行自动弥补，但是如同固定张紧装置运作。这种应用尤其有助于消除圆柱的突然屈伸及轴向振动。在堵盖底部的 M8 螺钉的功能为使得单向系统运转并对张紧装置进行预加压。

The tensioners TEN BLOC type TBB force the column to move in only one direction, that is the one of thrust. In fact, on the tightener acts a ratchet gear, that doesn't allow to the column to reenter during its working. With this device the tensioner automatically takes up any stretching, but operates as a fixed tightener. This application is particularly useful for cutting out whiplashes and axial head oscillations. The M8 screw on the bottom of the cup has the function both of accomplishment of the one-directional system and to pre-load the tensioner.

用于联动轴张紧的单向 TEN BLOC 安装举例：

Assembling example of a one-directional TEN BLOC for the tensioning of a return shift:

- A: 驱动轮 / Driving wheel
- B: 单向张紧装置 / One directional tensioner
- C: 从动轮 / Driven wheel
- S: 行程 / Stroke

#### 第 1 步:

扭转螺钉 (7) 将张紧装置预加压，直到圆柱 (1) 完全进入主体内部。

#### 第 2 步:

使用螺钉 M8 在主体 (2) 上的槽的位置将张紧装置牢固地固定在装置上。张紧装置的安装位置也应可使用槽的行程对链条长度作进一步的“手动”弥补 (见图 2)。

#### 第 3 步:

拧松螺钉 (7) 拧松长度与所想获得的行程 (S) 相等，不可超过在产品目录上所示的最大长度。螺钉 (7) 应留在张紧装置内。

#### Step 1:

Load the tightener by screwing the screw (7) until the column (1) is completely inside the body.

#### Step 2:

Position the tightener rigidly on the plant by using M8 screws and taking advantage of the slots on body (2). The tensioner should be positioned so you can take advantage also of the stroke of the slots for a further “manual” recovery of the length of the chain (as in figure 2).

#### Step 3:

Unscrew the screw (7) for a distance equal to the wanted stroke (S), without exceed the maximum dimension indicated on the catalogue. The screw (7) must be left in the tightener!

## 抗扭转系统: / Anti-Rotation system:

TEN BLOC 张紧装置有可能配备围绕在轴外的抗圆柱扭转系统，以防止安装在张紧装置上的配件的扭动。

这项手段可消除顶部的放射性振动，其应用主要适用于高速传动系统 ( $v>20 \text{ m/min}$ ) 及在所有链条易受强烈振动的情况下。由于抗扭动系统可使得皮带张紧滚轮在正确的位置运转，尤其适和在皮带张紧组件中使用。另外抗扭动系统还可在用张紧组件设计整个传动端张紧组的情况下使用，尤其在长轴间距的传动系统中。

抗扭转以两种方式进行：

### - 方式“a”(图 2):

使用一个具方形截面的垫圈完全阻止圆柱的扭动，其优点在于这种方法简单经济。

图 2 显示抗扭转组件“TBa”和组件“TN”或“TB”(图 1) 之间的制作区别，因在后者中圆柱有可能在其轴上扭转。在组件“TBa”中一个放置在方形截面铝制盒状主体的内部的具方形截面的垫圈防止圆柱的扭动。在组件“TN”或“TB”中，所用的垫圈的截面是圆形的。

### - 方式“A”(图 3):

使用张紧装置外部的配件。在这种情况下，圆柱方向为可调节的，使得其与链条 / 皮带调直，之后可能通过螺钉 (F) 阻止其扭动的可能性。

 TEN BLOC tighteners can be provided with an anti-rotation system of the column around its own axis in order to prevent the rotation of the kit assembled on the tensioner.

This solution eliminates the radial head vibrations, it is particularly useful for the transmissions where are involved high speeds ( $v>20 \text{ m/min}$ ) and in all operations where the chain is subjected to strong oscillations. The anti-rotation system is particularly useful in the use of elements for the tensioning of belts, since this system allows to the roller belt tightener to work always in the right position. Moreover it is useful when the tensioner element is used to realize all the return unit, above all with long distances between centers.

The anti-rotation is made in two versions:

### - Version “a”(Figure 2):

It considers the use of a washer with square section that it prevent completely the rotation of the column, its advantage is to be an easy and cheap solution. The picture 2 shows the difference of construction between a “TBa” anti-rotation element and a “TN” or “TB” element (figure 1) where the column has the possibility to rotate on its own axis. In the “TBa” element the rotation is prevented by a washer with square section positioned in the alluminium box body, that has square section too. In the “TN” or “TB” elements, instead, is used a washer with round section.

### - Version “A”(Figure 3):

It considers the use of a kit external to the tightener. In this case the column is revolving, in order to allow the alignment with the chain/belt, and in a second moment it is possible to stop by a screw (F) the possibility of rotation.

## 电子限位开关 型号: "E" / TRAVEL-END SWITCH type: "E"

弹簧式弹性组件 TEN BLOC, 可根据客户要求配备电子限位开关“E”。FCE 的应用范围广泛，可监督和确保机器的正确运转，也可接收和发出完成机械功能的命令信号。这项系统在有必要保证机器的完整性和 / 或保证操作人员人身安全时极为有用。

The elastic spring elements TEN BLOC can be supplied, on demand, with travel-end switch "E". The applications with FCE are various, since they allow to check and to prove the correct functioning of the machine, but also to receive or to give control signals for the carrying out of the mechanical functions. This system is particularly useful when you want to grant the integrity of the machine and/or where the workers' safety must be protected.

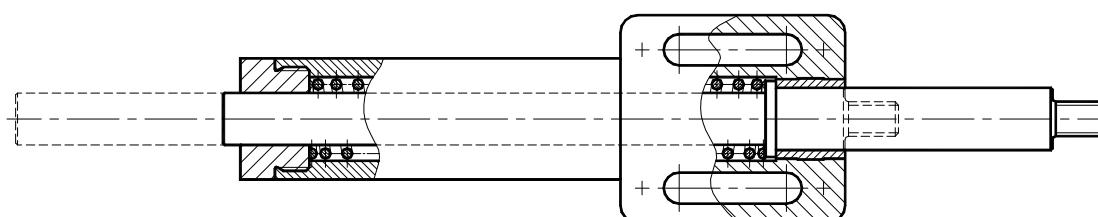

电子示图: / Electrical diagram:

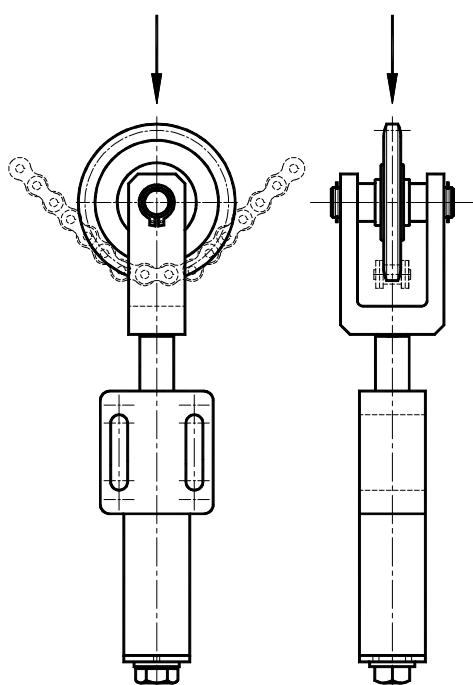

## 双导向 型号: "TBCU" / DOUBLE SLIDE type: "TBCU"

双导向 TBCU 的运转，由于圆柱在主体上和在终端堵盖的双重支撑，有效地减低由于运转磨损而造成的游隙，保证柱在伸出时的最大稳定性。这一办法尤其适用于具有高行程 (高于 60mm) 以及存在对柱轴横向负载的条件。有关此产品的技术数据，请咨询本公司技术部。

The execution with double slide TBCU, thanks to the double support of the column, both on the body and on the final cap, reduces significantly the coupling clearances due by the functioning wear, granting an higher stability of the rod in output. This solution is particularly useful for the applications with high travel (bigger than 60mm) and with loads transverse to the axis of the column. “拉动”链条张紧装置 型号: "TBt" / CHAIN TIGHTENER IN “DRAG CONDITION” type: "TBt"

为了运转的选择也可为了安装的需要，TBt 弹性组件可满足应用于拉动而不是推动动作的所有需要。

在这种应用中，与一般性运转不同，链条被拉动而不是被推动。有关此产品的技术数据，请咨询本公司技术部。

**The elastic element TBt allows to comply with the inquiries that consider applications in “drag condition” instead of in “thrust”, both for choices of functioning and for assembly necessity. With this application the chain will be therefore stretched instead of pushed, as for the standard executions. For the technical specifications of this product, we suggest you to contact our technical department.**

材料 铝制主体配黄铜轴承。套环为黄铜制。圆柱、堵盖、圆筒、小金属板、螺钉、栓销和弹簧均为钢制。

处理 喷砂铝，局部为镀锌钢，粗加工弹簧涂油。

应用 “抗扭转”“单向”弹簧式弹性组件。链条或皮带的游隙通过弹簧的运动自动补偿。“抗扭转”命名意指圆柱在安装之后，不可自由地在360°角度扭转。“单向”命名意指圆柱只能作推出动作，不能自由地重新进入。

C: 张紧装置行程。

 MATERIALS Body made of aluminium with brushing made of brass. Collar made of brass. Column, cap, cylinders, plate, stake, screw and spring made of steel.

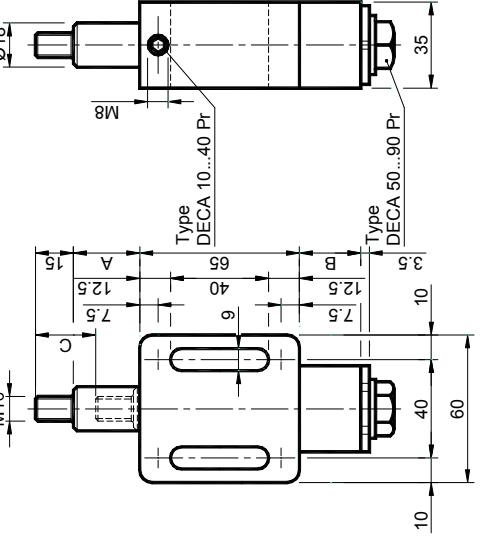

TREATMENTS Sandblasted aluminium, components made of galvanized steel, greased raw spring.

USE Elastic spring Element “anti-rotation” and “one-directional”. The recover of chain- or belt- slack takes place automatically through the spring action. The word “anti-rotation” means that the column, when it is positioned, it isn't no more free to rotate to 360°. The word “one-directional” means that the column has a movement only in thrust and it isn't free to renter.

C: Tightener travel.

**TEN BLOC 弹簧式弹性组件 – 型号 TB2-40 / Elastic spring Elements TEN BLOC – Type TB2-40**

 **材料** 内部主体为铝制。外部结构、圆柱、圆筒、螺钉和弹簧均为钢制。

**处理** 外部结构为镀锌。圆柱、圆筒和螺钉为镀锌钢，粗加工弹簧涂油。

**应用** 具有固定平面的盒状主体中含弹簧的弹性组件。链条或皮带的游隙通过弹簧的运动自动补偿。这个组件的力量为单组件的两倍。在张紧装置的堵盖上已配备用于预加压操作的螺钉。

C: 张紧装置行程 60mm。

 **MATERIALS** Aluminium internal structure. External structure steel, columns, cylinders, screws and springs made of steel.

**TREATMENTS** Painted external structure steel. Galvanised columns, cylinders and screws, greased raw springs.

**USE** Elastic element with spring in box structure with fixing surface. Chain or belt backlash is recovered automatically through the action of the springs; the strength of this element is double that of a single element. The tensioner already has screws in its stoppers for preloading.

Tensioner stroke 60 mm.

聚乙烯滑块 – 型号: L / Polyethylene sliding block – Type: L

材料 高分子密度聚乙烯滑块。

应用 具半圆形轮廓顶部磨平的滑块

适用于大轴距。

工作速度 ≤20 米 / 分。

工作温度 ≤70°C。

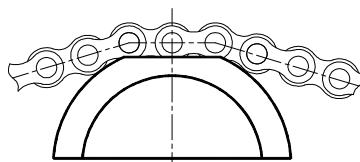

图 1

轮廓的形状如此设计使得与工作表面接触的始终有两 / 三个链条滚轮 (图 1)。这种解决办法以圆满经济的方式代替具大半径滑动轮廓的大型滑块。

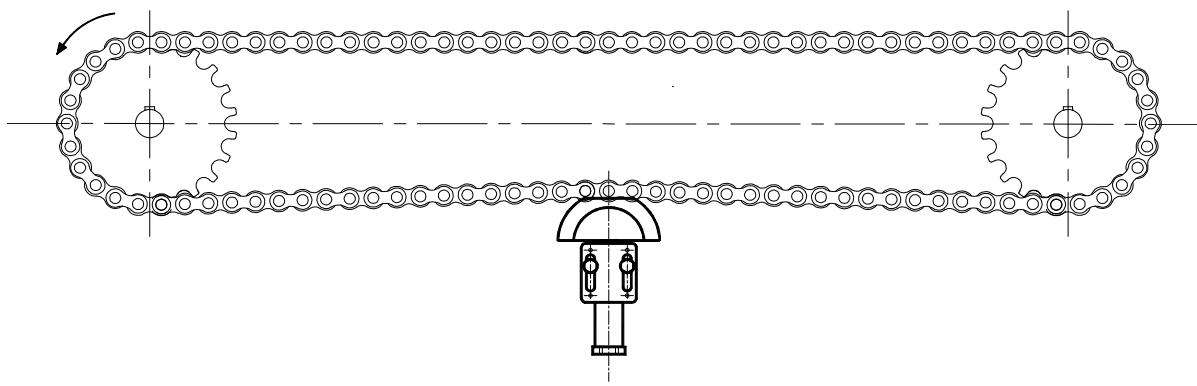

The profile shape has been created so that there are always two/three chain rollers in contact with the work surface (fig.1). This solution is an effective and inexpensive alternative to using large sliders with extensive sliding profile ranges.

MATERIALS Sliding block made of polyethylene, high molecular density.

USE Semi-circular lowered profile, suitable for large interaxis. Operating speed ≤20 m/min. Operating temperature ≤70°C.
